PROFESSIONAL SUMMARY

Final year Computer Science Engineering (Cybersecurity) undergraduate skilled in full-stack development with React, Spring Boot, and MySQL — building and deploying end-to-end applications with authentication and cloud infrastructure. Complements this with hands-on experience in application security, penetration testing, and machine learning-based threat detection systems. Combines software engineering fundamentals with a strong foundation in cybersecurity practices.

PROJECTS

EduShield: Student Dropout-Risk Detection & Scholarship-Matching Platform GitHub

- Built a full-stack platform using React, Spring Boot, and MySQL with JWT-based role authentication across 3 dashboard types, computing weighted risk scores from attendance, marks, and fee data to flag at-risk students
- Designed a bulk CSV import pipeline across 6 data types (students, mentors, scholarships, attendance, marks, fees), replacing individual manual entry with single-upload onboarding for an entire student cohort

SecureSphere: AI-Based Secure Communication System GitHub

- Engineered a multimodal safety pipeline analyzing 4 input types — text, image/video, audio, and location/SOS signals — to classify incidents across 5 risk categories, including weapon/violence and distress recognition
- Built an automated risk-scoring engine that triggered real-time alerts and SOS activation based on cumulative risk across input channels
- Implemented a cryptographic evidence vault using hash-based integrity verification for tamper-proof digital forensics and post-incident auditing

Anti Wildlife Trafficking: AI Monitoring System GitHub

- Built an NLP-powered classification system (TF-IDF, Logistic Regression, scikit-learn) to detect illegal wildlife trade listings across 3 platform types — marketplaces, social media, and dark web forums — with inference under 100ms
- Engineered suspicious-listing detection combining ML classification, CITES species keyword matching, and rule-based evasion detection (leetspeak, coded language) to generate structured alerts for protection agency workflows

INTERNSHIP EXPERIENCE

Cybersecurity Intern, Hackup Technologies June 2025 – July 2025

- Assessed 5+ web applications using OWASP Top 10 methodology, identifying 10+ critical misconfigurations
- Simulated Evil Twin and XSS attacks across test environments to evaluate wireless and web application vulnerabilities
- Performed OSINT reconnaissance using Maltego and wrote Python scripts for port enumeration and vulnerability scans

TECHNICAL SKILLS

Languages: Java, Python
Web Development: React, Spring Boot, HTML, CSS, MySQL
Data Structures and Algorithms: Arrays, Linked Lists, Stacks, Queues (Java)
Cloud and Deployment: Vercel, Render, Aiven
Security Tools: Nmap, Wireshark, Maltego, Burp Suite
Platforms: Linux (Kali), Git, GitHub, VS Code, Windows

CERTIFICATIONS

- Become an Ethical Hacker (Learning Path), LinkedIn Learning
- Practical Cyber Security for Cyber Security Practitioners, NPTEL (Score: 92%)
- Cybersecurity Analyst Job Simulation, Tata Forage
- Microsoft Security Essentials Professional Certificate, Microsoft and LinkedIn Learning

HACKATHONS AND COMPETITIONS

MSME Idea Hackathon 5.0
Developed and presented an idea proposal; selected and advanced to Round 2 out of competitive nationwide submissions.

24-Hour Hackathon, Coimbatore Institute of Technology
Developed an initial prototype for wildlife trafficking detection during the hackathon; placed 4th among competing teams.

EDUCATION

Dr. NGP Institute of Technology 2023 – 2027
B.E. Computer Science and Engineering (Cybersecurity) CGPA: 8.25

Sri Sowdeswari Vidyalaya Matriculation Hr. Sec. School HSC: 82%
